

Call For Participants

Absorption of omega-3 fatty acids over 24 hours

26.5 hour(s) to complete

£230

Experiment

Newcastle upon Tyne NE1 8ST, U

Northumbria University

The purpose of the study is to investigate how single doses of dietary supplements containing omega-3 fatty acids (commonly known as 'fish oils') are absorbed by the body over a 24 hour period. The study requires 4 separate study visits, each lasting 26.5 hours which will entail overnight stays in our sleep lab. Blood samples will be taken every 2 hours around the clock via a cannula by a trained phlebotomist. All food and drink will be provided. We are now only looking for female...
