The CBT experiences of British South-Asian Muslims

60 min(s) to complete

Sincere Gratitude

Interview

Online

University of Huddersfield

This study is about Muslims of South-Asian heritage living in the UK and their experiences of high-intensity Cognitive Behavioural Therapy i.e. therapy that lasted more than 10-weeks. This is an opportunity to share your understanding and experiences of how the relationship between yourself and your therapist did or did not develop during the course of treatment rather than focusing on any mental health issue for which you were referred. All contributions will be anonymised.
