Predictors of Victimisation and Quality of Life of Autistic Women

25 min(s) to complete

Sincere Gratitude

Online Questionnaire

Online

Victoria University

The study will investigate whether a number of risk and protective factors in childhood and adulthood may predict victimisation and quality of life of autistic women in adulthood. Differences will be compared among three groups:

- Women with an official diagnosis of autism/Asperger's
- Women that self-identify as being on the autism spectrum
- Neurotypical women (i.e: not autistic)
