

Call For Participants

Dietary fat intake and heart
disease risk

16 hour(s) to complete

Sincere Gratitude

Experiment

Ashby Rd, Loughborough LE11,
UK

Loughborough University

We are investigating how a saturated fat-rich meal, compared to a monounsaturated fat-rich meal, impact metabolic responses in the blood and adipose (fat) tissue which link to heart disease risk.

If you're interested in taking part, you will be invited to complete 5 laboratory visits in total, including 2 study visit days where blood and adipose tissue (fat) samples will be collected.
