Deakin University

The MAPP Study is an investigation of men's mental health and wellbeing during the peak age for becoming a father. The MAPP study is the first in Australia - and we believe the world - to specifically track over time how men at this age adjust to the family and peer group changes that occur during this period. The knowledge we gain will be critical in developing programs to educate, support and potentially treat men and families, particularly those who are vulnerable to depression and...
