

Call For Participants

Neurophysiological correlates
of self-referential processes in
arm-movement

105 min(s) to complete

£10

Experiment

Bath BA2 7AY, UK

University of Bath

The aim of the project is to help our understanding of how social factors influence the brain mechanisms supporting our decision-making and movement responses.

Each session would take about 90 minutes of your time. You would be asked to complete a simple computer task (involving some hand and arm movements) while EEG data is recorded, and to complete some questionnaires.
