EEG Reward Processing in Depression (RAPID)

4 hour(s) to complete

You will be compensated with cash payment of 28 Pounds for your time and you will also get...

Experiment

16 De Crespigny Park,
Camberwell, London SE5 8AF??

King's College London

We are interested in investigating how depression changes the way we respond to rewards, both in our behaviour and our brain activity as measured by EEG. Changes in the way we respond to rewards are common in depression. We would like to better understand the brain activity that is associated with them, as this knowledge may help develop better ways of diagnosing and treating depression.
