Capella University

The focus of this qualitative case study is to explore why primary care practices (PCPPs) continue to delay the adoption of electronic health record (EHRs) system regardless of the ability to increase efficiency and quality of patient health care. Electronic health records (EHRs) have long been hyped as a critical factor for decreasing health-care costs and improving health-care quality, by enabling clinical analytics using “big data” (Sherer, Meyerhoefer, & Peng, 2016).
