

Call For Participants

Lung function and hydration level

6 hour(s) to complete

Sincere Gratitude

Experiment

Uxbridge UB8, UK

Brunel University

This study is being conducted to investigate the effect of hydration on lung function. The study involves 4 experimental conditions where you will undertake each of the 2 dehydration protocols twice. The first method of dehydration will involve an exercise trial in hot conditions, and the second will involve a prolonged period of water restriction (28 hours). You will undergo lung function tests to see whether/how your lungs have been affected in each condition.
