Has this child been sexually abused?

35 min(s) to complete

Sincere Gratitude

Online Questionnaire

Online

University of Brighton

The aim of this study is to see how demographic factors (such as gender and age) affect our perceptions of complainants and defendants involved in a hypothetical case of alleged child sexual abuse. Our findings will help us to understand underlying factors that might bias perceptions in this type of case and so is very relevant to real court proceedings.

The research project is a collaboration between University of Brighton and University of Gothenburg.
