Experiment

MRC SGDP (Social and Genetic Developmental Psychiatry Centre), Camberwell, London SE5, UK

King's College London

This study looks at two different types of medication that are sometimes used in treatment of children with Attention Deficit Hyperactivity Disorder (ADHD). The medications we are studying are called lisdexamfetamine and guanfacine. We would like to find out how these two drugs act on the brain of children and adolescents with ADHD. This is where you can help us!
