## BLF Early COPD Study

3 hour(s) to complete

Cash

Experiment

Nottingham NG5 1PH, UK

University of Nottingham

The main objective is to study the very early stages of the development of Chronic Obstructive Pulmonary Disease. The investigators will do this by recruiting a novel cohort of smokers (age 30-45), in whom the investigators will follow the trajectories of lung function decline to identify prospectively those at risk of excess decline.
