The effects of fluoxetine on anger processing in male healthy volunteers

10 hour(s) to complete

Screening: £10; Testing: £90

Experiment

Warneford Ln, Oxford OX3 7JX, UK

University of Oxford

In this study, we are looking at the effects of a single antidepressant dose on emotional processing in male healthy volunteers between 18-55. We are specifically looking at the effects of fluoxetine, a drug commonly used in the treatment of depression and anxiety. The study will involve a 1.5h screening visit & a 9h testing session. The testing session will include several questionnaires and computer tasks involving emotional stimuli. If you are interested, please fill in the questionnaire.
