ESTRA: Brain Activation in Eating Disorders

6 hour(s) to complete

Cash

Experiment

Denmark Hill, London, UK

King's College London

It is thought that Anorexia Nervosa and Bulimia Nervosa may be associated with specific patterns of thoughts, behaviours and brain activation. This project is recruiting adults (age 18-25 years) with Anorexia Nervosa or Bulimia Nervosa to complete online questionnaires and attend one study day, where they will answer some questions, provide a blood or saliva sample, complete computerised tasks and receive an MRI scan. All participants will be compensated with £100 for their time.
