

Call For Participants

Language and the Brain

5 min(s) to complete

Sincere Gratitude

Experiment with a few, very short preliminary questions

Online

Swansea University

As part of a study on brain flexibility, we are conducting research on differences in the way certain information is processed by the brain in people that speak one language (monolingual) compared to those that regularly speak more than one (bilingual).

Wishing to investigate this further, we invite you to take part in a short computer-based task, which should take no longer than 10 minutes.
