Subjective executive function
in recreational cocaine users
versus controls

25 min(s) to complete

£25 Shopping voucher draw

Online Questionnaire

Online

University of Liverpool

The aim of the current study is to assess subjective day-to-day executive functioning in cocaine users and controls

This study consists of a quick initial collection of basic demographic data, then a short drug history questionnaire followed by a measure of subjective executive functioning.

The study will take approximately 25 minuets to complete and a chance to be entered into a £25 high street voucher draw.
