Sleep, Anxiety, and Behavioural Problems in Autistic Children

30 min(s) to complete

Free professional evaluation of
your child's severity of autistic
symptoms

Online Questionnaire

Online

University College London

Want to know if your child sleeps well? I am seeking parents or siblings of autistic children (aged 6-16 years) to take part in an online study, aiming to examine if sleep disturbance intensifies anxiety, repetitive behaviour and sensory abnormalities in autistic children. You will complete a survey (30min) and record a week of sleep and wake-up times (max. 3min/day) for the child. A summary and professional interpretations of assessment results will be provided upon request.
