University of the Highlands and Islands

This study is on the public perceptions of the impact that beaver dam's potentially have on Atlantic salmon. The reintroduction of species is a relatively new concept in the UK and beaver is the first reintroduction of a keystone species (A species that significantly affects most of an ecosystem) in the UK. It is important to consider the public's perceptions of such a reintroduction for the benefit of further reintroduction's and mitigating any human-wildlife conflict.
