## tDEP: Brain Stimulation as a Treatment for Depression

6 week(s) to complete

Up to £135 in vouchers and travel expenses

Clinical Trial

United Kingdom

University of East London

We are looking for participants aged 18 and over with low mood/depression to take part in our study looking into a new treatment for depression.

The study aims to look at whether transcranial direct current stimulation (tDCS), could be a potential treatment for major depression that can be used at home. tDCS is a non-invasive brain-stimulation method that has been shown to reduce depressive symptoms.
