

Call For Participants

Synthetic tinnitus during
executive functioning tasks

90 min(s) to complete

Cash £10 + reasonable travel
expenses

Experiment

113 The Ropewalk, Nottingham
NG1 5DU, UK

University of Nottingham

Researchers who investigate the ability to concentrate refer to the ability as “cognition”. Recent research suggests that people with tinnitus may perform differently on computer-based puzzles that measure different types of cognition. The purpose of this research study is to investigate if participants without tinnitus can perform computer-based puzzles while listening to a distracting noise that simulates tinnitus.
