Can Voice Assisted devices  
such as Amazon Echo help the  
elderly

15 min(s) to complete

Sincere Gratitude

Online Questionnaire

Online

University of Manchester

The aim of this study is to find the potential usage of voice-assisted devices for the elderly. Voice assisted devices are controlled by a voice and it can connect to many different apps. you can ask it to play your favorite music or you can ask it to tell the latest news or provide information. As people are living older and healthier the government are encouraging the elderly to stay at home for longer due to increased cost and shortage in care services to cope with the demands.
