The Relationship between Adverse Social Experiences and Psychopathology

15 min(s) to complete

Sincere Gratitude

Online Questionnaire

Online

University of South Wales

The overarching purpose of the current study is to investigate the relationship between adverse social experiences (e.g., making a comment to someone in regards to their appearance) with your significant others and how this is linked to psychopathology (e.g., depression, anxiety disorders, obsessive compulsive disorders etc), if these adverse experiences lead to suicidality, and lastly, how the role of defeating entrapment mediates these relationships.
