Computing: A new conversational experience for people on the autism spectrum

90 min(s) to complete

Travel reimbursement £20

Experiment

United Kingdom

University of Bristol

I am writing to invite you to take part in a research project to test a prototype text-messaging application for people on the autism spectrum.

The study involves the measurement of biological signals such as heart rate, skin temperature and skin conductance, which can be used to classify levels of anxiety, and sent by smartphone to a recipient.
