How may coronavirus restrictions affect osteoarthritis risk in over 60s?

30 min(s) to complete

Sincere Gratitude

Online Questionnaire

Online

Loughborough University

Being physically active has many benefits including improving physical function and reducing joint pain. However, we don't know how changes in activity, as we are currently experiencing due to the coronavirus restrictions, may be related to risk of osteoarthritis developing or worsening.

For this study we are looking for anyone over the age of 60 with or without osteoarthritis to complete an online survey about physical activity, sedentary behaviour and joint symptoms.
