Does Monotropism Predict Task-Switching Cost?

20 min(s) to complete

Sincere Gratitude

Online Questionnaire

Online

University of Portsmouth

I am a postgraduate MSc Psychology student at the University of Portsmouth. This study explores whether individual differences in monotropism (a focused attentional style) predict task-switching performance. Participants (18+, fluent in English) will complete a short demographic survey, the Monotropism Questionnaire (47 items), and a Stroop task. The study takes ~15–20 minutes, is fully anonymous, and must be completed on a desktop/laptop.
