

Call For Participants

Does the fat composition of a meal influence risk factors for heart disease

16 min(s) to complete

Sincere Gratitude

Experiment

Loughborough, UK

Loughborough University

We are investigating how a saturated fat-rich meal, compared to a monounsaturated fat-rich meal, impact metabolic responses in the blood and adipose (fat) tissue. The meal will include 2 muffins and a milkshake.

If you're interested in taking part, you will be invited to complete 5 laboratory visits in total, including 2 study visit days where blood and adipose tissue (fat) samples will be collected.
