The Effects of Physical Inactivity on Younger and Older volunteers

8 day(s) to complete

£400 Cash

Experiment

Nottingham NG7 2FT, UK

University of Nottingham

We are interested in seeing how being physically inactive or 'sedentary' affects the way your muscles work. We know that this is different between younger and older individuals but we want to try and find out why. That way we can try and develop treatment or interventions to try and reduce the effect on the elderly. The study involves lab visits (Total of 8), muscle, blood, saliva and urine samples, MRI scans and DEXA scans.
